Virginia Water Monitoring Council Citizen Monitoring Group Inventory

Monitoring Program: Chesapeake Bay Citizen Monitoring Program

Program Description: Started in 1985, the Alliance for the Chesapeake Bay's (ACB) Citizen Monitoring Program has over 500 volunteers monitoring over 300 sites across the Chesapeake Bay region. Some citizen volunteers have worked with the ACB for more than fifteen years, watching their rivers through the seasons and regularly submitting the valuable data they collect. Volunteers in this program learn to be stewards of their rivers and surrounding lands, and educate others while providing valuable water quality information. Citizen volunteers collect weekly water quality samples and perform tests with equipment and supplies provided by the Alliance. Tidal and non-tidal waters are tested for dissolved oxygen, temperature, pH, salinity (where appropriate), and water clarity. Some monitors also record daily precipitation and weather observations. Additionally, some volunteers also monitor water quality for habitat parameters necessary for the growth of submerged aquatic vegetation (SAV, or underwater grasses). Other monitoring tasks that volunteers have performed or are performing include: combined chemical and biological monitoring; dissolved nutrients (nitrogen and phosphorous) sampling for laboratory analysis; water clarity in response to hurricanes and extreme storm events; "snapshot" water quality, wildlife, coliform bacteria, sea nettle, and epiphytes on SAV.

Year Begun: 1985
